

Advisory group of adult patients and caregivers Of children with type 1 diabetes mellitus (AURORA)

ARE YOU:

- An adult (age 18+) with type 1 diabetes (T1D);
- An adolescent (age 12-18) with T1D;
- A caregiver of a child or adolescent with T1D aged 2-17 years old with at least 2 years since T1D diagnosis and/or experience with the Alberta Health Care system.

Join AURORA and become part of a Patient and Caregiver Advisory Group.

People living with T1D need information as they face treatment decisions and complications across their life. As part of AURORA, your lived experience navigating the healthcare system as you manage your and/or your family's diagnosis will help guide creation of a T1D knowledge hub in partnership with researchers and clinicians.
